Biological Basis of Heredity: Cell Reproduction

SEXUAL REPRODUCTION: involves two parent cells; each parent gives some of its traits (characteristics) to the offspring MITOSIS vs. MEIOSIS MITOSIS produces two cells with the same diploid (two sets) number of chromosomes MEIOSIS produces four cells with only one set of chromosomes (called monoploid or haploid); these cells are called gametes:

Meiosis and Sexual Reproduction - Goldie's Room

Comparison of the processes of mitosis and meiosis. Mitosis produces two diploid (2n) somatic cells that are genetically identical to each other and the original parent cell, whereas meiosis produces

four haploid (n) gametes that are genetically unique from each other and the original parent (germ) cell. Mitosis involves one cell division, whereas meiosis involves two cell divisions.
