We've highlighted the unstable isotopes (radioisotopes or radionuclides) in the table above to make it easier to see them.. The first generalisation we might make is that if the neutron to proton ratio is about 1, then the isotope is likely to be stable. If we pull out all the isotopes with n/p not close to 1, say those with $n/p \geq 1.29$ and those with $n/p \leq 0.775$, we can construct a new ...
