Thermal comfort is the condition of mind that expresses satisfaction with the thermal environment and is assessed by subjective evaluation (ANSI/ASHRAE Standard 55). The human body can be viewed as a heat engine where food is the input energy. The human body will generate excess heat into the environment, so the body can continue to operate.

### **Thermal comfort - Wikipedia**

In dimensional analysis, a ratio which converts one unit of measure into another without changing the quantity is called a conversion factor. For example, kPa and bar are both units of pressure, and  $100 \text{ kPa} = 1 \text{ bar}$ . The rules of algebra allow both sides of an equation to be divided by the same expression, so this is equivalent to  $100 \text{ kPa} / 1 \text{ bar} = 1$ .
