At rest the heart pumps around 5l of blood around the body every minute, but this can increase massively during exercise. In order to achieve this high output efficiently the heart works through a carefully controlled sequence with every heart beat - this sequence of events is known as the cardiac cycle.

The Cardiac Cycle - Pressures in The Heart - TeachMePhysiology

The period of time that begins with contraction of the atria and ends with ventricular relaxation is known as the cardiac cycle (Figure 1). The period of contraction that the heart undergoes while it pumps blood into circulation is called systole. The period of relaxation that occurs as the chambers fill with blood is called diastole.
