CHAPTER 8: Rotational Motion Answers to Questions 1. The odometer designed for 27-inch wheels increases its reading by the circumference of a 27-inch wheel 27" for every revolution of the wheel. If a 24-inch wheel is used, the odometer will still register 27" for every revolution, but only 24" of linear distance will have been traveled.

Chapter 8: Rotational Motion Linear speed: distance traveled per unit of time. In rotational motion we have linear speed: depends where we (or an object) is located in the circle. If you ride near the outside of a merry-go-round, do you go faster or slower than if you ride near the middle? It depends on whether "faster" means
