Cheek Cell Lab - observe cheek cells under the microscope Cheek Cell Virtual Lab - virtual microscope view of cells. Plant Cell Lab - microscope observation of onion and elodea Plant Cell Lab Makeup - can be done at home or at the library Plant Cell Virtual Lab - use a virtual microscope to view plant cells.. Comparing Plant and Animal Cells - looks at cheek and onion cells

Cells - The Biology Corner

By the end of elementary school, students should know that by breathing, people take in the oxygen they need to live. This basic knowledge allows middle-school students to develop a more sophisticated understanding of how respiration works in terms of basic macroscopic (e.g., major organs involved) and microscopic (e.g., cellular) processes involved with breathing.

The Oxygen Machine - Science NetLinks

Evapotranspiration can be defined as the sum of all forms of evaporation plus transpiration, but here at the Water Science School, we'll be defining it as the sum of evaporation from the land surface plus transpiration from plants. If you search for the definition of evapotranspiration, you will ...

Animal cells. As with all of Earth's organisms, animals are built from microscopic structures called cells. Cells are the basic unit of life and these microscopic structures work together and perform all the necessary functions to keep an animal alive.

Animal Cells | Basic Biology

Hydrophilic Definition. A hydrophilic molecule or substance is attracted to water. Water is a polar molecule that acts as a solvent, dissolving other polar and hydrophilic substances. In biology, many substances are hydrophilic, which allows them to be dispersed throughout a cell or organism. All cells use water as a solvent that creates the solution known as cytosol.

Pearson, as an active contributor to the biology learning community, is pleased to provide free access to the Classic edition of The Biology Place to all educators and their students.

Pearson - The Biology Place

Gas exchange is the process by which oxygen and carbon dioxide move between the bloodstream and the lungs. This is the primary function of the respiratory system and is essential for ensuring a constant supply of oxygen to tissues. This article will discuss the principles of gas exchange, factors affecting the rate of exchange and relevant clinical conditions.
