Carbon Cycle Questions Flashcards | Quizlet

the carbon cycle is the biogeochemical cycle by which carbon is exchanged among the atmospheres of the Earth. The cycle is usually thought of as four major reservoirs of carbon interconnected by pathways of exchange.

what is the carbon cycle? | Yahoo Answers

The Carbon Cycle. Carbon is in the Earth's atmosphere in the form of carbon dioxide. Plants remove carbon dioxide from the atmosphere and use it in a process called photosynthesis to make their food. When plants and animals die, they decay (decompose, break down) in the soil. This process occurs by microorganisms called decomposers.

The Carbon Cycle Worksheet - EdPlace

Best Answer: The "carbon cycle" refers to the flow of carbon through different parts of the Earth system - including the air and the bodies of plants and animals. The carbon cycle is a natural and integral part of life on Earth. A single carbon atom stored in a blade of grass may shift to the body of an animal that eats the grass.

What is the carbon cycle? | Yahoo Answers

What is the carbon cycle? Carbon flows between each reservoir in an exchange called the carbon cycle, which has slow and fast components. Any change in the cycle that shifts carbon out of one reservoir puts more carbon in the other reservoirs.
