Chronic hepatitis B is defined as the persistence of HBsAg in serum for at least 6 months. Patients with chronic infection may be divided into those with evidence of active replication, typically associated with abnormal transaminase levels and higher viral loads, and those in the nonreplicative state, associated with decreased markers of liver inflammation and damage and lower viral loads.

What It Is. Brachycephalic airway obstruction syndrome (BAOS) \* is characterized by primary and secondary upper respiratory tract abnormalities, which may result in significant upper airway obstruction. BAOS is an inherited condition in the cavalier King Charles spaniel. The breed is pre-disposed to it, due to the comparatively short length of the cavalier's head and a compressed upper jaw \*\*.

MRI versus CT. CT will depict most pancreatic lesions, but is sometimes unable to depict the cystic component. MR with heavily weighted T2WI and MRCP will better demonstrate the cystic nature and the internal structure of the cyst and has the advantage of demonstrating the relationship of the cyst to the pancreatic duct as is seen in IPMN.
