Diabetes causes a gradual restriction of blood flow. > In people without diabetes, fast blood flow triggers the enzymes that produce "NO". "NO" relaxes the smooth muscles in the walls of the vessels and prevent cells from sticking to the walls. It also blocks the ability of immune cells to home in on and protect the diseased portions of blood vessels.

How does diabetes affect the blood flow in the cardiovascular system? | Socratic - Homework in a snap | Socratic

The heart is a muscular organ in most animals, which pumps blood through the blood vessels of the circulatory system. Blood provides the body with oxygen and nutrients, as well as assisting in the removal of metabolic wastes. In humans, the heart is located between the lungs, in the middle compartment of the chest.. In humans, other mammals, and birds, the heart is divided into four chambers ...
