Bone, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the support structure of the body. In the areas of the skeleton where bones move (for example, the ribcage and joints), cartilage, a semi-rigid form of connective tissue, provides flexibility and smooth surfaces for movement.

Vasculitis, referred to as angiitis, that affects the central nervous system (CNS) is one of the most formidable diagnostic and therapeutic challenges for physicians because the clinical manifestations of CNS vasculitis are highly variable, the CNS is a common target of many forms of systemic vasculitis and may also be the sole target of vasculitis, and specific noninvasive tests are lacking ...

Primary Angiitis of the Central Nervous System

The nervous system is the part of an animal's body that coordinates its behavior and transmits signals between different body areas. In vertebrates it consists of two main parts, called the central nervous system (CNS) and the peripheral nervous system (PNS). The CNS contains the brain and spinal cord. The PNS consists mainly of nerves, which are long fibers that connect the CNS to every other ...
