Correct answer: The sum of pH and pOH is always 14. This is because the product of proton concentration and hydroxide concentration must always equal the equilibrium constant for the ionization of water, which is equal to  $1.0 \times 10^{-14}$ . In this question, we know that the pOH is equal to 2.13, allowing us to solve for the pH.

For acid solutions pOH is greater than 7, and for basic solutions pOH is less than 7. It is possible to have solutions in which pH or pOH are greater than 14 or less than 0 (i.e., negative). Note that the number of decimal places in a logarithm indicates the number of significant figures in the original number.

Calculating pH 1 Calculating pH How is pH related to the concentration of hydronium ions? Why? In biology and other science courses pH is introduced as a way to quantify the acidity or basicity of a solution. This property can be measured using a pH probe or with an indicator paper strip that changes color at different pH values. But, what is ...
